

What are ICSI and its procedure in Kenya

ICSI (Intracytoplasmic Sperm Injection) is a specialized fertility treatment offered by [Surrogate Mother Kenya](#), helping couples overcome male infertility challenges. The procedure involves directly injecting a single healthy sperm into an egg to enhance fertilization. Once fertilized, the embryo is transferred to the woman's uterus for implantation. Surrogatemotherkenya provides expert ICSI services with personalized care, ensuring hopeful parents achieve their dream of starting a family.

What are ICSI and its procedure in Kenya

The whole ICSI process is a laboratory process by which a doctor and couple need little co-operation in order to make ICSI treatment possible.
