

# Causes of Hip dysplasia | Dr. Divyanshu Dutt Dwivedi

Hip dysplasia happens when the hip joint doesn't form properly. It can be caused by things like genetics, breech birth, tight swaddling, or hormones from the mother. If not treated, it can cause pain and trouble moving. In serious cases, you might need hip replacement surgery. For help and treatment, consult Dr. Divyanshu Dutt Dwivedi, a skilled [hip replacement surgeon in Lucknow](#). He can provide effective care to help you feel better with hip replacement.
