

# How to Remove Frosted Film Without Damaging Your Windows

Are you wondering why your window glass looks frosted or hazy? Over time, mineral deposits, acid rain, and hard water stains can cause an unsightly frosted appearance. But don't worry! With mild cleaners like vinegar and dish soap, plus soft cloths and a plastic scraper, you can safely remove the film without scratching the glass. For heavier buildup, vinegar and baking soda do the trick. Read more now at <https://tintingexpress.hashnode.dev/how-to-remove-frosted-film-without-damaging-your-windows>
