Import note content from PDF file

We have added new file type to "Import from file" feature.

Last week we have release new feature called **Import from file** that allows to start new note by importing it from popular document formats like .doc(x), .txt, .rtf, .odt and .html.

Today we have added new type of file that can be imported: PDF. These files often contains a lot of text and images, so importing them threw new feature will help you start your work even quicker.

Import from file is available only to our **Premium** users.
