

4 Common Signs of Infertility in Women – Dr. Heena Agrawal

Are you trying to get pregnant but it just isn't working out? You might be concerned about whether you or your partner. Need to get checked out for a medical issue. Let's learn what infertility is and the possible causes and symptoms in women.

So let's discuss here the most common signs of infertility.

1. Irregular periods

Irregular periods are a sign that you are either not ovulating or suffering from some hormonal issues.

2. Unusually painful period

For some women experiencing cramps, heavy flow, and pain during the period is normal because it is regular for them.

So, we urge you to visit the [Infertility and IVF Indore](#) (if you stay here) or a reliable doctor near you.

3. Sudden weight gain or weight loss

One of the major signs of infertility is sudden weightless or weight gain. If you have not changed your diet or exercise and experience sudden weight loss or weight gain, then infertility could be the reason.

4. The sudden hair growth or hair loss

Hormonal changes could result in sudden hair growth on your body or face. Whereas hair loss could be due to thyroid dysfunction.

No doubt there are a lot of infertility clinics in Indore, Let's go with [Best Infertility Specialist in Indore](#).
