

## **Instant Aboriginal**

Well, fast enough anyway. Will premise this by stating have fun and be flexible with the G'MIC sliders. Anyway, first, you need to pick a target. Using a Tithonia extract (flattened on white) for this one.

target.jpg

Now run G'MIC's Stenci preset with the settings below:

stencil\_1.png

What you have so far:

stencil.png

Blend using [this texture](#) for the following:

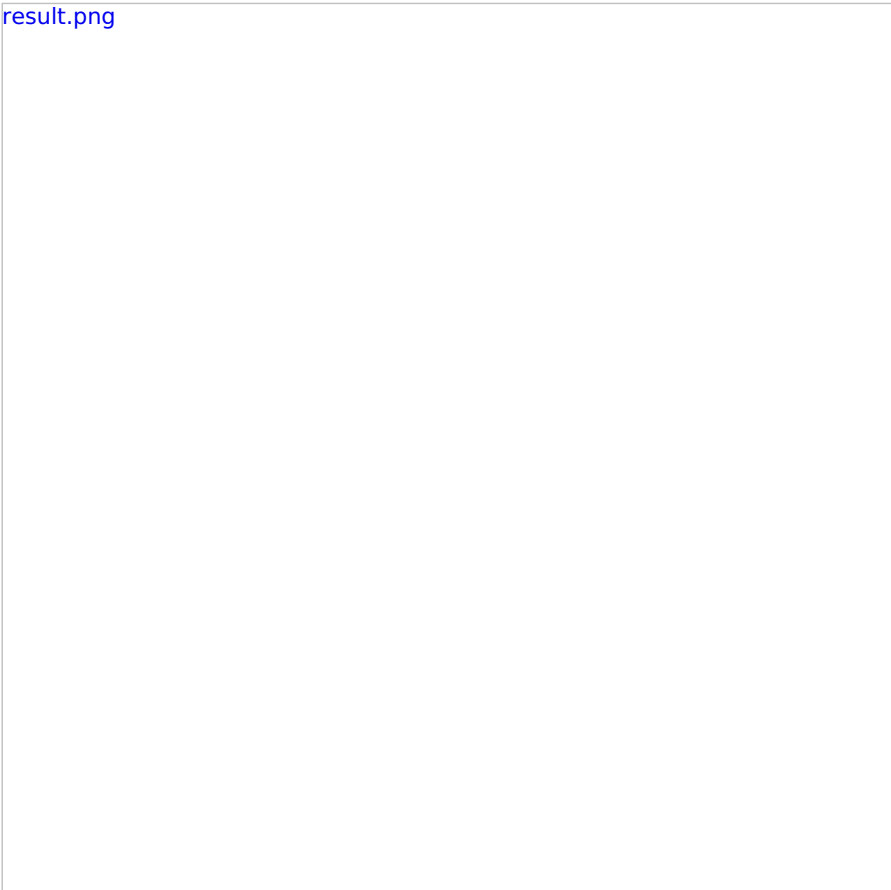

Flatten and run with the settings below:

Result (click on image for higher resolution):

[result.png](#)

Also, click [here](#) for another example which started it all.

Also, below a variant by replacing the target with a blended result of G'MIC's Stain Glass preset (background white still) before going through the procedure. Again, experiment for yourself. :)
