

About (.SSX) Softube Plugins Format

About (.SSX) Softube Plugins Format

MODULAR: <https://magesy.blog/vst/modular-v2-5-9-win-read-nfo-r2r/#more-165047>

MODULAR is Able to Load into it all Plugins that include **SSX Format:**

<https://magesy.blog/download/ssx/>

They install themselves in:

C:/ Program Files/ Common Files/ Softube/ SSX

But R2R warns that MODULAR generates a lot of work to our CPU.

(Most of .SSX) single Modular modules are protected one by one. More and more legit modules you have, more and more load time and cpu / memory wastes you will have. Any single module releases by R2R are unpacked from magesy download WrapWarden and does not access to iLok License Manager service at all. Now is the time for legit users to complain of the massive performance loss to developers 😊
