A typical dosage of doxycycline for dogs is – mg/lb every 12 hours for 7 to 14 days. Dr. Drew recommends a higher dosage of – mg/lb every 12 to 24 hours for 10 or more days. Always follow the recommendation of your vet. The following chart shows a dosage of mg/lb. doxycycline doses by at least 2 hours. When giving orally (by mouth) to horses, doxycycline is absorbed best when food has been withheld for a few hours before a dose. Liquid forms of this medication must be measured carefully. Your veterinarian or pharmacist can help by providing special measuring spoons or syringes.
