

## ANTIBIOTICS & VETERINARY DRUG RESIDUES

### Veterinary Drug

Veterinary Drugs In Animal Products Destined For Human Consumption

Exactly why are Veterinary Drugs Used?

The prime reason why animals are kept and farmed is for the main benefit of humankind.

Veterinary science is harnessed, similarly to medical science for humans, to the betterment of animal health insurance and animal well being, but also for the protection with the consumer, e.g. protection up against the transfer of parasites from animals to humans. Along the way me is made from veterinary medicines or drugs, specifically these reasons:

for diagnosing, treatment, alleviation of pain, modification or protection against disease and/or other unhealthy physical conditions;

for the improvement of growth or production;

for improved yields, quality and safety with the products produced from animals;

for correcting or modifying behavior.

Which kind of Veterinary Drugs Are Used?

### GMP Factory

Veterinary drugs used are:

antibiotics

pesticides

anthelmintics (de-worming products)

vaccines

insecticides

other drug groups

Consumer health concerns about the availability and rehearse of veterinary medicines in animals is warranted and important. However, any potential human health hazard as a result of utilization of drugs in animals should be scientifically examined by means of a thorough risk/benefit analysis for each and every drug. In other words, after that the effects on human health be if these medicine is not used

How Are Veterinary Drugs Controlled?

Consumers wish to be assured with the safety of veterinary medicines which you'll find control measures set up.

Veterinary drugs are scientifically researched and formulated to be effective, beneficial to the dog and safe, for both the pet and the consumer, when prescribed dosage levels are honored.
