certain medications. Stopping medication requires as much care as starting it. Medications should be phased out gradually under the direct supervision of your doctor. [HOW LONG WILL DRUG THERAPY LAST? The length of drug therapy will vary with the individual and the severity of the disorder. You are likely to need medication for at least several. 12MM+ Questions Answered · Helped Over 8MM WorldwideA+ Rating – Better Business Bureau.

MEDICATIONS. This chart lists the names of drugs commonly prescribed for anxiety disorders, the disorder for which they're indicated, and how they are thought to work. NOTE: The information in this table applies to the treatment of anxiety disorders in adults age 18 and older, not to the treatment of these conditions in children and adolescents. Common – Drowsiness, dizziness, increased saliva production, change in sex drive or ability. Serious but Rare – Mental or mood changes (hallucinations, thoughts of suicide), slurred speech, difficulty talking, loss of coordination, trouble walking, memory problems. Psychoactive medications can be of significant benefit, but it is important to balance the potential risks of treatment against the risks of untreated illness. The list is intended to reflect usual doses and brief medication information. The list is not intended to serve as comprehensive drug. Psychopharmacological Drug Listing (by class) Antipsychotics Sedative/Hypnotics Antianxiety Antidepressants Psychomotor Stimulants Mood Stabilizers Aripiprazole (Abilify) Haloperidol (Haldol) Olanzapine (Zyprexa) Paliperidone (Invega) Quetiapine (Seroquel/Seroquel XR) Risperidone ((Risperdal/Consta) Ziprasidone (Geodon) Acetophenazine (Tindal).
