

Can somebody help me? I am in Sydney Australia. If you also live in sydney, you are welcome to visit me. My question is what sort of tools can I utilize for repairing my digital camera? I would like to give you an easy answer but I have to elaborate. A simple jam can usually be fixed with no tools required at all. Just flipping switches carefully and carefully pressing buttons, along with gently pounding your digital camera on various sides utilizing the palm of your hand may free it. Or just by cutting open the digicam guard on the back chances are you'll see a burned or free element. Or placing lighter fluid on gear mechanism and blowing dry can remove trapped shafts that usually swivels.
