

4 Types of Tone woods You Should Know About

When it comes to expressing our love for our guitar, we know no bounds. From selecting the best acoustic guitar to getting a spruce wood guitar, we do different things that help us in getting a great sounding instrument. But, we do not realize that the sounds and the characteristics of guitars are used by the tone woods they are made from. Interesting, isn't it? To choose the right guitar for yourself, you should know about the different types of tone wood you can choose.

Here are some of the types of tone woods that are popularly used in making a guitar that you like the most:

1. Sitka Spruce

One of the most popular tone woods used in guitars is the Sitka Spruce. Known for its excellent sound, it is used by a lot of professional guitar makers and players. The guitars made from Sitka Spruce are characterized by their powerful and clear tone. So, the next time when you are testing a guitar that has a clear and pleasant tone, you can guess that it is a Sitka Spruce guitar. With their sturdy and lightweight appearance, they can be easily identified.

2. Mahogany

Mahogany is a tone wood that is used to make the top of most of the guitars. This kind of material is known for different types of punchy tone. With its high-end response and sound qualities, it is a good option to go for. If you are new to playing the guitar and do not know about this material, then you can identify it by its structure. Mahogany is a tone wood that is characterized by its dense and woody sound. If you wish to give an impressive performance, you should select this.

3. Rosewood

Out of all the other tone woods, Rosewood is a material that is known for its fine quality. Since it gives a unique sound when it is played, it is very different from a [Spruce wood guitar](#). When searching for your materials, if you find a tone wood with a sparkling top, you will know that it is Rosewood. This tone wood gives a sound that is clear and strong at the low end. You can choose whether you need to use Brazilian tone wood or Indian tone wood according to your preference.

4. Maple

If you are looking for a tone wood that does not have a high intensity of tone coloration, you should go with maple. This is a heavy tone wood that has a flat sound. For this reason, it is used in making various acoustic guitars. If you wish to perform to a different level of your song, you should choose Maple for your guitar performance. If you wish to gather more information about maple, you need to ask a guitar maker about more details.

If you wish to buy a Spruce wood guitar tone wood for your performance, you should visit the websites of various tone wood retailers.
