

# Uncover hidden details with high-quality UV camera lenses

The UV camera lenses are designed for highly sensitive imaging applications. That includes sensitivities to ultraviolet light beyond the visible spectrum. Their usage is commonly found in forensics, biological research, and semiconductor inspection applications. Where UV light helps bring out particular details not known to human vision. [UV Camera Lens](#) captures UV wavelengths, which makes imaging better in applications from document verification to surface inspection and even detects flaws in materials. Which, under normal light conditions, are not visible. There are endless combinations with specific wavelength sensitivity abilities. Which ensures flexibility based on the task requirements. You can buy these lenses in a wide range from Superior CCTV.
