

VPX Chassis | Elma Electronics

A **VPX chassis** is a versatile, high-performance platform that houses VPX-based systems used in demanding applications like telecommunications, military, and aerospace. This chassis is designed to support a variety of **VPX** modules, offering exceptional durability, thermal management, and expansion capabilities. Elma's **VPX chassis** solutions provide a reliable foundation for systems that require high-speed data processing and interconnects. Whether for commercial or defense use, the [VPX chassis](#) ensures seamless integration, scalability, and modularity to support a wide range of applications with demanding specifications.
