

What is HTML?

<https://www.javatpoint.com/what-is-html> HTML is an acronym for Hyper Text Markup Language used for creating web pages and web applications.

HTML is an acronym for **Hyper Text Markup Language** used for creating web pages and web applications. Let's see what Hypertext Markup Language and Web pages mean.

<https://www.javatpoint.com/what-is-html>

Hyper Text: HyperText simply means "Text within Text." A text that has a link within it, is a hypertext. Whenever you click on a link that brings you to a new webpage, you have clicked on a hypertext. HyperText is a way to link two or more web pages (HTML documents) with each other.

Markup language: A markup language is a computer language that is used to apply layout and formatting conventions to a text document. Markup language makes the text more interactive and dynamic. It can turn text into images, tables, links, etc.

Web Page: A web page is a document that is commonly written in HTML and translated by a web browser. A web page can be identified by entering an URL. A Web page can be of the static or dynamic type. **With the help of HTML only, we can create static web pages.**

Hence, HTML is a markup language that is used for creating attractive web pages with the help of styling, and which looks in a nice format on a web browser. An HTML document is made of many HTML tags and each HTML tag contains different content.
