

Who is the deity of Ketu?

According to Vedic astrology, Rahu and Ketu are considered shadow planets. According to astronomy, two points are formed by the intersection of the orbits of the Sun and the Moon, one of them is known as the Rahu, and the other point is called Ketu. In any birth chart, these two planets live at a distance of 06 zodiac signs (180 degrees) from each other. Because these planets are sensitive points and not celestial bodies, and they have a profound effect on humans, so in Vedic astrology, they have been given the title of planets.
