In addition to these workarounds, you should always remain connected to the Windows 10 helpdesk for all the time so that you can avail of a prompt troubleshooting service to avoid all technical obstacles.

How I learned about the technicians?

It is an interesting story. When I came to know that the printer machine was not functioning on my Windows 10 PC, I believed it necessary to approach the printer technicians. I invested my productive hours on the lookout of a genuine technician. But ultimately, I knew it all was caused by some incompatibility issues with Windows 10.

I heard of some independent [Microsoft Windows 10 support](https://support.microsoft.com) technicians who offer their expertise to help users round the clock. But before I approached the technicians, I headed to official help page <https://support.microsoft.com> and browsed some relevant details.

So the technicians started troubleshooting the issues right from the beginning. It took just a few hours to address the issue – and finally I was able to use my printer machine on Windows 10 PC with high accuracy. I could get connected to the technicians easily with the help of their toll free phone number to [contact Windows support](#) for online technical assistance on Windows operating system.

If you do also experience such circumstances and you are not able to work with your printer machine on your Windows 10 properly, then you may get through the way what I used to troubleshoot the printer issue.
